

Hepatitis B

- Getting a blood test is the only way to know if you have hepatitis B. Any doctor can do this but those specially experienced with hepatitis B are listed in the directory.
- If you have been diagnosed with hepatitis B regular monitoring is important to prevent liver damage.

Hep Services Directory

What is the directory?

The directory is a list of:

- Health services that offer information about hepatitis B, hepatitis C, and liver health care
- Other important services such as Fibroscans and needle and syringe programs
- Information sheets about hepatitis C that can be read, downloaded, or printed.

Where to find it

Check out the directory to find out where to go to get tested and manage your liver health:

<https://liverwell.org.au/liver-conditions/hep-services-directory/>

Or, you can take this to any medical professional or support person and they can help you look up where to go.

Hepatitis C

Maybe you've heard about hepatitis C cure but not sure what the deal is now?

- Tablets are taken for between 4 and 12 weeks (no injections)
- You don't have to stop using drugs to get cured
- No restrictions on treatment – anyone with hepatitis C can get treated
- It works – over 95% of people are cured
- No nasty side effects.

Check out the directory to find out where to go!
